

International Trade Fair of Machines, Tools and Components for the Wood and Furniture Industries

### **DREMA – Safety Trade Fair**

DREMA trade fair venues already provide high levels of safety controllability. At the premises of the MTP Poznań Expo, since the government lifted the restrictions in June, a gardening trade fair was held, as well as event for fans of the automotive industry and sport. They gathered more than 10 000 participants.

We strictly operate in accordance with government and national sanitary (Chief Sanitary Inspector) regulations and recommendations. Safety protocol ensures observance of the required health precautions, hygiene measures and distancing rules and encompasses both measures for headcount and space management. Fair venues are being continuously disinfected, sanitizers are made available across the entire premises. All participants are asked, as is the case in the public sphere and in retail, to maintain a minimum distance of 1.5 m and wearing a face mask. Registration and sale of the admission tickets are available only online on the [www.tobilet.pl](http://www.tobilet.pl) platform, after the submission of the epidemic questionnaire. Contactless body temperature screening points are provided in every fair grounds entrance.

*'We offer all the prerequisites for safe and successful DREMA trade fair. I personally hope that this year DREMA will be a re-start that the wood and furniture industry needs so urgently in post-covid reality. I invite you to Poznan to be a part of it',* says Andrzej Połtrończak DREMA project manager.

The above are just examples of introduced regulations. The hygiene and sanitary standards are constantly adapted to future developments and changing legal requirements – more information on [www.drema.pl/en](http://www.drema.pl/en)
