## Eumabois launches its new website

Milan, 23<sup>rd</sup> of November 2021

Eumabois, the European federation of woodworking machinery and tools manufacturer, is excited to announce the launch of its new website with latest design and features: [www.eumabois.com](http://www.eumabois.com).

After many months of work and dedication, the new web page is finally online offering its users all the information and updates on the federation and its member associations with a state-of-the-art navigation experience. The primary goal of this redesign was to create a more valuable and fully responsive communication platform easily accessible from all devices.

Juergen Koepfel, Eumabois President commented: “The launch of Eumabois new homepage is a very important step for us in order to facilitate and upgrade our information and communication offer to all Eumabois stakeholders. I want to take the opportunity to thank Mrs. Dr. Goi for executing the project in this professional manner.”

The homepage dedicated to the national associations, their member companies and to the exhibition organizers supported by Eumabois worldwide has been brought to the next level not only in design but in content, too. Beside key projects on European level, latest news out of Eumabois exhibition network are also available. People can also keep up to date on the latest industry announcements via social media through the LinkedIn and Twitter channels.

Eumabois will continue to strive to enrich its web-contents and invites all to explore the new site. The official launch of the digital platform took place during the 2021 annual General Assembly held in Vienna with the national associations being present.
